

# Quick Start Guide

**Home Assistant Connect ZBT-2**

For more information,  
[visit go.nabucasa.com/zbt-2](http://go.nabucasa.com/zbt-2)

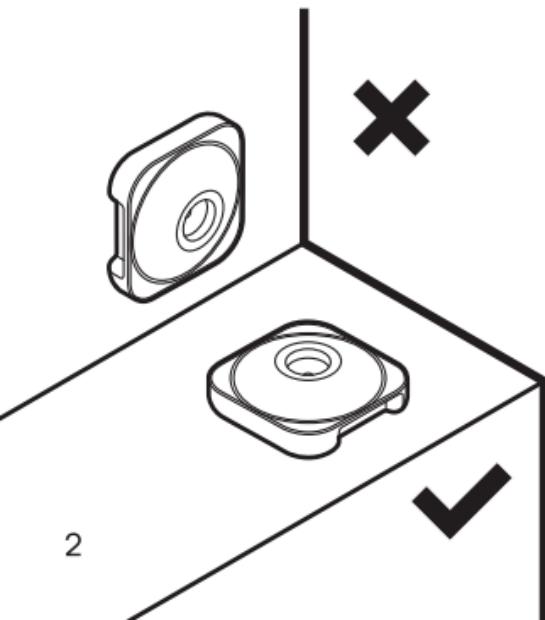

# 1

# 2

Find a space where you can place the adapter upright.

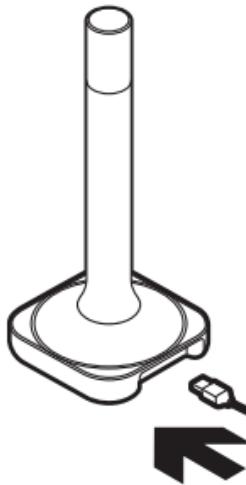

Place the adapter in a vertical position.  
Do not mount on a wall sideways.

Screw the antenna to the base.  
Be careful not to overtighten, as this can damage the adapter beyond repair.

# 3

Plug the USB-C cable into Connect ZBT-2.

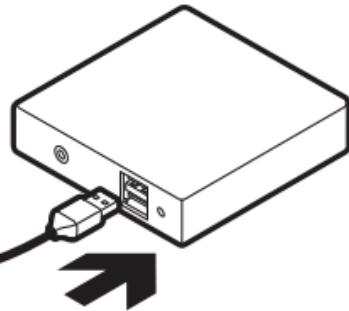

# 4

Connect the USB cable to a USB 2.0 or later port on a device running Home Assistant 2025.11 or newer.

If you have not used Zigbee before, Home Assistant should discover the adapter.

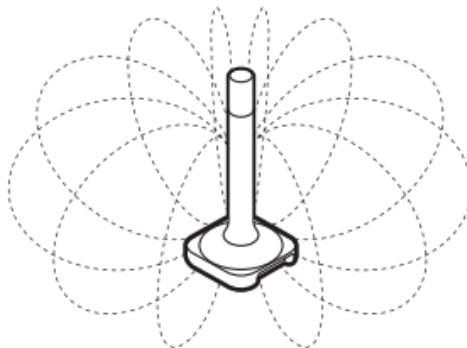

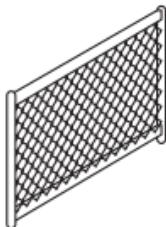

Otherwise, please visit our documentation to migrate your current configuration.

# Where should I put it?

Place Connect ZBT-2 in a central location, away from materials or devices that may block radio transmission or cause interference.
